

Alstom wins a 15-year frame agreement to deliver point machines to Trafikverket

- Alstom has been awarded a frame agreement, worth around € 107 million, to deliver point machines
- Alstom will provide point machines for conventional and future high speed lines enhancing passenger comfort and lowering maintenance costs

19 September 2023 – Alstom, global leader in smart and sustainable mobility, has been awarded a frame agreement worth around €107 million with Trafikverket, the Swedish Transport Administration, for the delivery of modular point machines designed to improve track stability for passenger comfort and reduce total cost of ownership by allowing automatic track maintenance on Swedish train lines.

Alstom will provide point machines to Trafikverket for the next 15 years, with the option to extend the contract for up to 25 years. The start of possible call-offs from the agreement begins in October 2024.

“We are very pleased to be awarded this agreement with Trafikverket and with our proven experience in delivering high-quality point machines suitable for the Nordic conditions. We are confident that this will contribute to improved reliability,” says Maria Signal Martebo, MD Alstom Sweden.

Alstom will supply two types of modular in-tie point machines to Trafikverket, suitable for conventional and high-speed rail lines up to 300 km/h. These electromechanical in-sleeper point machines have been designed to operate up to 1,000,000 switches in various conditions and environments, eliminating clearance constraints for installation in tunnels, underground, and on viaducts.

With 40 years of expertise, Alstom offers a comprehensive range of point machine solutions for conventional, in-tie and high-speed line applications. These point machines are certified and service-proven in Sweden, Norway, Denmark and Italy with over 2,800 units installed.

Alstom in Sweden

Alstom is the largest player on the Swedish railway market, with over 1000 trains delivered. Alstom is holding several large maintenance contracts and is offering maintenance in 19 local depots, including a depot in Motala specialising in heavy maintenance and refurbishment. The company is also leading the ERTMS rollout in Sweden both onboard and trackside and is delivering the new standard national traffic management system for Trafikverket.
